# Research Participants Needed for Study on Shoulder Pain

Have you had anterolateral shoulder pain for over two weeks?

You may be eligible for our research study of a novel treatment that could improve your shoulder muscle function.

## You May Qualify If You

- Are between 18-49 or 60-90 years old
- Having had pain in the anterolateral shoulder region for over 2 weeks
- No acute shoulder muscle tears
- No prior shoulder surgery
- No osteoarthritis-induced shoulder pain
- No medication that would affect the nervous system
- No metal implants or pacemaker

# **Participation Involves**

- 3 visits at the UT campus
- Shoulder muscle function assessment and exercise suggestions
- Receive Neuromuscular Electrical Stimulation

### **Potential Benefits**

Participating in this study may improve your shoulder muscle function.

### Location:

Bellmont Hall, BEL 546D 2109 San Jacinto Blvd, Austin, TX 78712 For more information, please contact
